

Headlight Restoration Process

Common Reasons For This Service

- › Diminished Headlight Visibility
- › Foggy Headlight Appearance

The Benefits

- › Saves Hundreds of Dollars
- › Increases Visibility at Night
- › Enhances Vehicle Appearance

The Situation:

Can't see the road ahead of you at night? Is your field-of-vision impaired even before night falls? Know your headlights are working, but can't figure out why they're not illuminating the road at full capacity? The likely cause is faded headlights and replacing simply doesn't make sense when you can restore to a like-new appearance. Reap the benefits of improved vision and appearance; do it all for a fraction of the cost of replacing your headlights.

Makes Headlights Shine Like New!

The Process

Using an innovative restoration process and the state-of-the-art Reflect-a-Coat® cleaners and protection products, the technician uses the Reflect-a-Coat® process to remove the oxidized film, polish the lens, and apply a protective UV-resistant coating. The restored headlights are cleared of a hazy cast and restored to a like-new appearance.

AFTER

Ventilation-System Service

Common Reasons For This Service

- › A/C System Odor
- › Decreased A/C Cooling & Air Flow
- › Regular Maintenance of Ventilation System

The Benefits

- › Cleans Vehicle's Ventilation System, Reducing or Eliminating Harmful Allergens
- › Helps Create a Clean-Smelling Ventilation System
- › Removes Debris in Your Ventilation System to Help Optimize Your A/C's Performance

Clean and Deodorize!

Did you know that your system serves as a breeding ground for allergens like mold, mildew, spores, and fungi? With these nasty allergens circulating through your car every time the A/C or defroster are activated, the Ventilation-System Service makes sense... for you, your health, and the comfort of a clean-smelling vehicle.

Cleaning and Deodorizing Process

The Process

The technician starts by examining your vehicle's A/C system for leaks and wear; the compressor, evaporator and all A/C lines are checked as part of this process. The tech administers the appropriate amount of lubricant oil into your vehicle's system, if applicable, which helps reduce wear and quiet the system.

To complete the process, the tech administers a highly-effective product to clean and remove odor-producing materials from your ventilation system, leaving you with a clean-and pleasant-smelling vehicle.
